

I CLAIM:

1. An improved structure of a heater for an outdoor table having a base
seat mounted with an isolation plate, a pair of semi-stacking male
tubes with multiple corners and a screw nut with a circular press plate
5 at the top end thereof, and the two ends of the isolation plate are
connected to the bottom inner edge of the base seat for securing and
the center of the isolation plate is provided with a recessed sunken seat
which is engageable with the multiple corners of the male tubes, and
the center of the sunken seat is provided with through hole for
10 mounting with a pair of the semi-stacking male tubes and the external
diameter of the male tubes is smaller than an umbrella hole on the
table surface, and is engageable with a screw nut, thereby when the
base seat is placed on the table, the male tube is inserted into the
umbrella hole and the screw nut is mounted to the male tube from the
15 bottom of the table and the bottom edge of the base seat and the
circular press plate clip the edged wall of the umbrella hole so that the
heater is secured to the table.
2. The heater for an outdoor table of Claim 1, wherein the surrounding of
the screw nut is radially mounted with a plurality of rotating plates.
- 20 3. The heater for an outdoor table of Claim 1, wherein a through hole is

provided to the surrounding of the screw nut at appropriate position thereof.

4. The heater for an outdoor table of Claim 1, wherein the surrounding of the base seat is provided with an opening which is covered with a fastening cap.
